

The industry's leading turnkey system for policy review

### **Program Introduction**

The life insurance industry has experienced a general drop in the investment returns underlying permanent life insurance policies. Interest rates have been at historical lows and many equity markets have performed below their historic norms. Recent events in the capital markets have made the review of life insurance policies even more critical. At the same time, a new generation of life insurance products entered the marketplace with lower mortality charges, lower company expenses, and low cost guarantees\*.

#### What does this mean for you?

It represents a great opportunity to visit with clients to enhance their existing life insurance portfolio. If you don't do it, someone else will!

We have a program to help you evaluate whether your clients' policies are performing as they should. If they are not, we will help you identify solutions designed to improve the situation.

### **Policy Evaluation Program**

#### In-force Ledger Review

Provide us with an in-force ledger on the existing permanent life insurance policy showing the existing premium stream and outcome. If the existing premium stream is no longer projected to be sufficient to meet the client's policy goals, we'll provide an illustration with a recommended premium stream.

### Underwriting

If a new policy appears to be a viable option, we will help you through the underwriting process and obtain a new policy.

#### **Alternative Solutions**

We'll compare the in-force ledgers on the existing policy to alternative solutions utilizing newer, more efficient policies, if necessary. In some instances, the client's situation may be greatly enhanced with the new policy. This may not work in all situations, but even if the result is an increased premium flow to "right" the existing policy, you will have done your client a favor.

We make it easier to review your clients' policies and help grow your business!

For Financial Professional Use Only. Not intended for use in solicitation of sales to the public. The Policy Evaluation Program is a complimentary service offered by Tellus Brokerage Connections through some of the top financial service professionals in the country to assist consumers in analyzing their existing insurance policies. For use with non-registered products only. It is not a program designed to encourage consumers to replace existing insurance policies. Products and programs offered through Tellus are not approved for use in all states.

### **Getting Started**

Part I — Your Clients

### **Identifying Your Potential Candidates**

The first and most logical place to start is your present block of business. This is the business that you are responsible for and the business that is most important for you to review.

Ask yourself:

- Do you have clients whose financial, business or personal situation has changed? A major part of this program is servicing your clients' changing situations.
- Have you placed any rated cases? Have you contacted those clients about any health changes? Many ailments and illnesses are underwritten differently now than they were just a few years ago. Would they now be eligible for a Table Shave Program? Changes in Table Shave Programs over the last few years have created opportunities to improve your clients' situations.
- Have you written any Whole Life (WL) cases? New generation Guaranteed\* UL policies might be more competitive than WL in providing a guaranteed death benefit.
- What were the largest cases you've placed?
- Have you received any in-force policy requests from your clients? More and more clients are requesting and expecting this service as they seek greater value for their premium dollars.
- Have you performed any policy audits? If not, the Policy Evaluation Program (PEP) and its turnkey methodology is a great way to start the process.
- Are you over 55? Have you been in the Financial Services business for more than 20 years? If so, you probably have a number of clients who may benefit from this analysis.

List 5 of your largest placed cases/or clients who would value a Policy Evaluation Program review.

| Client Name | Policy Date | Policy Premium/Policy Type |  |
|-------------|-------------|----------------------------|--|
| 1.          |             |                            |  |
| 2.          |             |                            |  |
| 3.          |             |                            |  |
| 4.          |             |                            |  |
| 5.          |             |                            |  |

Once you have identified those clients who you wish to meet with, you can use the Overview and FAQ to provide pre-meeting information. Use the Prospecting Letter for Clients to create a letter for use on your letterhead.

<sup>\*</sup> All guarantees subject to the terms and conditions of the contract at time of issue and to the claims paying ability of the issuing insurer.

#### Part II — New Prospects

Anybody with a current permanent life insurance policy is a prospect for this service. A customizable agent flyer provides you with an inexpensive method of generating interest. The Prospecting Letter for Prospects can be used on your letterhead. Use the Overview and FAQ to provide information once you have interest.

List 5 prospects you have spoken to in the last year who have large life insurance policies that could be reviewed.

| Client Name | Policy Date | Policy Premium/Policy Type |  |
|-------------|-------------|----------------------------|--|
| 1.          |             |                            |  |
| 2.          |             |                            |  |
| 3.          |             |                            |  |
| 4.          |             |                            |  |
| 5.          |             |                            |  |

#### Part III — Advisors/Trustees/CPAs/Attorneys

Anyone who has advised a client on the purchase of life insurance, or is responsible for the maintenance of life insurance, is a prospect for the service. A customizable agent flyer provides you with an inexpensive method of generating interest. The Prospecting Letter for Advisors can be used on your letterhead. You can use a mailing list to contact CPAs, Trust Attorneys or Trustees. Use the Overview and FAQ to provide information once you have interest.

List 5 Advisors/Strategic Partners you have worked with who may recognize the value of PEP (CPAs, CFPs, Attorneys, Bank Trustees, etc.)

| Action (19) Sum (1 usees) |             |                            |  |  |  |
|---------------------------|-------------|----------------------------|--|--|--|
| Client Name               | Policy Date | Policy Premium/Policy Type |  |  |  |
| 1.                        |             |                            |  |  |  |
| 2.                        |             |                            |  |  |  |
| 3.                        |             |                            |  |  |  |
| 4.                        |             |                            |  |  |  |
| 5.                        |             |                            |  |  |  |

#### **Getting a Customized Report**

Use the Fact Finder as the basis for gathering information about the insured. Place special emphasis on changes, including financial, business, and personal changes, as well as any health changes. Use a cover memo, if necessary, to provide pertinent information about the case. Send the information to CBS Brokerage for processing. The carrier response time can vary from one to four weeks. Depending on the carrier, we may ask your assistance in obtaining the in force ledgers. Although most carriers are cooperative, we have no control over the carriers' response and some will not correspond with a third party, regardless of the policy owner's authorization.

If you are not the Broker of Record on the current policy, you may want to use the prototype Authorization Letter on your letterhead to create a version for your exclusive use. This will better assure you of being the Broker of Record for any alternative or additional coverage that may transpire as a result of the review.

### **Are You Truly Covered?**

#### The Importance of Reviewing Your Current Life Insurance Policy

When you purchase a permanent life insurance policy, you are purchasing a financial vehicle that is designed to last a lifetime. Yet a policy is often tucked away and forgotten, with no thought to evaluating ongoing performance.

This is unfortunate.

A permanent life insurance policy is unlike any other financial vehicle. It has an investment component with an underlying cost structure based on health assumptions. And the strength of the policy relies on many variables that are constantly changing.

The Policy Evaluation Program (PEP) allows you and your agent to review your current policy to determine if it is performing as expected.

**Plan Highlights** 

- You will receive valuable information on the state of the life insurance marketplace today.
- PEP provides an in-depth analysis of the present condition of the existing life insurance policy in an easy-to-read format.
  - This analysis allows you to easily see all of the options that might be available if alterations or modifications must be made to your policy.
- PEP can help you review the value of your policy.

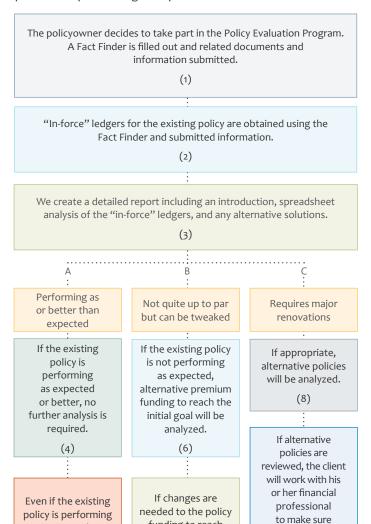

Permanent life
insurance is a
complex financial
instrument that
should be reviewed
periodically to gauge
actual policy
performance against
original expectations.

These materials are provided for educational purposes only. The Policy Evaluation Program is a complimentary service offered by Tellus Brokerage Connections ("Tellus") through some of the top financial service professionals in the country to assist agents/brokers in analyzing their consumers' existing insurance policies. It is not a program designed to encourage agent/brokers to replace existing insurance policies. The insurance policies described are issued by various companies. They are not available in all states. Policy terms, conditions and limitations will apply. All comments about such products are subject to the terms and conditions of the insurance contract issued by the carrier. For use with non-registered products only. In order to provide a recommendation to a client about the purchase of or transfer of funds from an investment product, including variable life, a producer must hold the proper securities registration and be currently affiliated with a FINRA member broker-dealer. Tellus makes no representation regarding the suitability of this concept or the product(s) for an individual, nor is Tellus providing tax or legal advice. You should consult your own tax, legal and other advisors before purchasing insurance products.

Not a deposit • Not FDIC insured • Not guaranteed by the institution • Not insured by any federal government agency • Are subject to investment risks

### **Program Overview**

Ideal Candidates: Individuals or entities with permanent life insurance policies who would like an evaluation to determine if their policies are performing as expected.

funding to reach

the initial goal, or

a change is made

to the initial goal,

the client will work

with a financial

professional to make

changes.

(7)

as expected or

better, it should be

re-evaluated in the

coming years.

(5)

- 1. A life insurance policy is a complex instrument. A "sales illustration" that combines medical information and financial projections was created to help the consumer make a purchasing decision. Unfortunately the only thing we've found to be true is that the illustrated values are approximations and may not occur exactly as shown. As a result life insurance policies should be reviewed regularly to make sure that they can fulfill their objectives and meet the owner(s) needs.
- It is important that the information given in the Fact Finder is correct and complete. An in-force ledger is a re-projection of the "sales illustration" using the current assumptions on the policy going forward.
- 3. The report generated using the in-force ledgers provides a financial analysis of the current policy and can provide internal rate of return (IRR) on death benefit and cash values, as well as other statistics. If needed, the premium funding is analyzed to provide alternative solutions to reaching the initial goal. In some situations, alternative policies may be analyzed if appropriate.
- 4. If the policy goals are met, no further analysis is needed.
- 5. Policies should be reviewed at least every two years, even if performance is satisfactory.
- If policy performance is not what was expected, the report will show alternative funding to help reach the original goal. By monitoring the policy often, potential modifications to policy premium will be less drastic.
- The client will work with his/her financial professional to make sure that the necessary changes are made to the policy.
- 8. There may be certain situations when the use of a new, more efficient policy may be contemplated. This would only be undertaken if there were specific and clear benefits to the policyholder.
- 9. If the client decides that alternative policies will be evaluated, CBS will assist the producer in the evaluation process.

## **Frequently Asked Questions**

#### What is the Policy Evaluation Program?

It is a program designed to provide pertinent information for, and a systematic analysis of, a permanent life insurance policy that is presently in force. The program is designed to give life insurance consumers an understanding of their policy performance, with an eye toward maximizing value. It is a program that was precipitated by dramatic changes in the life insurance marketplace in the last decade. All life insurance policies should be periodically reviewed to gauge actual policy performance against original expectations to make sure that the policy will reach the intended goals. Variable products are out of scope for the Policy Evaluation Program and comments on such products are provided for educational purposes only. Variable products can only be sold by registered representatives of FINRA member firms.

#### Is there any cost for this service?

No, this is a complimentary service.

#### What are the components of the Program?

A report is generated on each policy that consists of the following:

- An introduction that succinctly discusses the changes that have occurred in the life insurance marketplace.
- In-force ledgers of the existing policy with different funding options or goals.
- A one-page spreadsheet analysis of the "in-force" ledgers showing the Internal Rate of Return (IRR) of the death benefit and assumed cash values at various intervals, the number of years that the policy will stay in-force under current assumptions, and the number of years the policy is guaranteed\* to stay in-force.

All life insurance policies should be periodically reviewed to gauge actual policy performance against original expectations and to make sure that the policy will reach the intended goals.

• If appropriate, the report may include optional policy alternatives, but only if there is a distinct client advantage.

#### What is an in-force ledger?

Different from an annual statement, which is a snap-shot of a policy's performance, an in-force ledger is a "reprojection" of the values of a permanent life insurance policy that is already in-force. An in-force ledger uses a policy's cash values as of the date of the "in-force" ledger and then projects values into the future based on premium levels and other variables that can be chosen. It is a way to analyze the performance of the policy versus the original projections. The effect on the policy of changing premium levels, death benefits, etc., can be analyzed.

\*Any guarantees mentioned are subject to the claims paying ability of the issuing company.

### Frequently Asked Questions, cont.

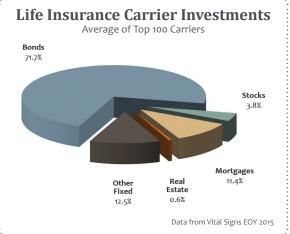

What factors may affect the performance of existing permanent life insurance

policies?There are three major factors that affect the performance of a life insurance policy:

The first is the interest rate return on the underlying investment that provides the cash value in the policy.
 In Universal Life (UL) and Whole Life (WL) policies this investment account is in insurance company-directed investments. As you can see from the chart on the right, it consists mostly of bonds, with some real estate assets. In Variable and Variable Universal Life (VUL) policies the cash value is invested in separate accounts with the asset classes chosen by the policyowner.

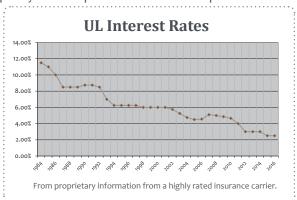

Of the three factors noted, the one that more significantly affects the actual performance of the policy versus that projected in the sales illustration is the interest rate obtained. The actual expenses and mortality charges used in original illustrations are easier to project and predict than the investment return. In all illustrations there is an assumed projection and a guaranteed projection. The assumed projection is a "best guess" of what will occur in the policy going forward using the current assumptions for expense, mortality and investment return. The guaranteed projection uses only those factors that are guaranteed when it projects the outcome. If the actual current interest rate that is obtained in the policy is less than the projected rate, the policy will not perform as well as expected.

# How have actual investment returns affected the expected performance of existing policies?

Over the course of the last 30+ years, the interest rates credited to UL policies for the most part have dropped, as demonstrated by this chart. The chart represents the actual credited interest rates on a particular UL policy issued by a major life insurance carrier. When the company introduced their UL policy in 1984, the current interest rate was almost 12%; since that time, the current rate has dropped.

#### Frequently Asked Questions, cont.

According to a 1998 article in Trusts and Estates magazine, in 75% of trust policies that were at least 5 years old, the death benefit could be increased by 40% without any increase of premium. Although no more recent studies exist, no industry developments indicate any dramatic change to this trend.

WL policies operate somewhat differently than UL policies. The underlying investment returns are just one component of any dividends that a whole life policy may receive. Dividends represent a "return of premium" that is dependent on not just the insurance company's investment returns, but also the "gains" in the mortality and expenses where the company's actual experience proves less costly than what was illustrated.

Typically in Variable Life and Variable Universal Life (VUL) policies, the investment returns depend on the performance of the separate accounts chosen by the policyowner based on risk tolerance, liquidity needs, time horizon and goals for the policy. The separate accounts are managed by fund managers, similar to many open ended funds, and can invest in a mix of stocks, bonds or other products based on the investment and risk tolerances of the underlying fund.

Lower returns in the underlying investment of the life insurance policies purchased may cause actual policy cash values to be lower than the original illustrated values. If investment returns lag for an extended period of time, the policy may lapse, or a higher premium may need to be contributed for the policy to reach the original goals.

As you can see from the table to the right, the

investment return in the policy can dramatically affect the amount of premium that needs to be contributed to reach a goal.

| Premium Needed to Fund Policy to Age 100 at Different<br>Credited Interest Rates |          |  |  |  |
|--|----------|--|--|--|
| at 7.5%  | at 4%    |  |  |  |
| \$13,500   | \$20,500 |  |  |  |

Assumes \$2.5M Universal Life policy for a male, age 45 and preferred non-smoker, paying premium all years with \$100,000 cash value at age 100.

The analysis above shows the affect of an interest crediting rate on the performance of a Universal Life policy. The 7.5% credited rate approximates the rate paid on UL policies two decades ago. The 4% rate is in line with what most UL policies are crediting today. As you can see, it would take approximately 34% more premium at the lower interest rate to keep the policy from lapsing before age 100, assuming the lower interest rate and the lower premium funding the policy lasts only to age 83 which is less than expected mortality.

#### Have recent events in the capital markets affected my permanent policy's performance?

Possibly. Market results can and will affect a policy's performance. In the case of variable products, less than anticipated market results may not allow a policy to equal its originally projected results.

#### Frequently Asked Questions, cont.

As shown in the previous section, general account products tend not to be as affected by market fluctuations as variable account products due to their underlying investments. Nevertheless, fluctuations in the marketplace may cause the respective current dividend scales and current interest rates of return for whole life and general account universal life products to be lower than projected.

If crediting rates are not met, a policy may not meet the policy owner's needs. The recent volatility in the capital markets has only served to make the need for current policy review all the more critical.

#### How have the expense and mortality charges in a life insurance policy changed?

Over the last 10 to 15 years, both the expense and mortality costs for life insurance policies have dropped. The mergers and acquisitions within the life insurance marketplace have affected expenses within the policy, which include all of the costs of issuing a policy. This has created a much more efficient marketplace, as technology and economies of scale reduce the costs of doing business. Commissions to the agent have been reduced as life insurance manufacturers react to a more competitive marketplace. Lastly, demutualization, in which a life insurance carrier changes from a mutual company (owned by the policyholders) to a stock company (owned by the shareholders) has created more efficient policies for two reasons: (1) Demutualization opens up the capital market for the life insurance carrier to expand and acquire other companies; (2) Once it becomes a stock company, the carrier is forced to become more competitive since it must answer to stockholders.

Mortality charges have dropped yearly as medical improvements and better health habits contribute to a longer life for most Americans. According to a 1998 article in Trusts and Estates magazine, in 75% of trust policies that were at least 5 years old, the death benefit could be increased by 40% without any increase of premium. Although no more recent studies exist, no industry developments indicate any dramatic change to this trend. The lower mortality costs resulted in more efficient policies. We continue to see this today. A copy of the article is available upon request.

#### How are the expense and mortality gains reflected in existing life insurance policies?

As stated before, permanent life insurance policies are issued with the expectation that the policy will use the current life insurance costs, including mortality expenses. Improvements to the mortality costs in the life insurance marketplace are typically not reflected in existing policies, but may be in newer policies, as the carriers introduce new products. So, the gains that can be seen in the marketplace may or may not be reflected in the policies owned by existing policyholders. Because of the competitive nature of the marketplace, many insurers use the gains that are created to lower costs on new policies.

#### Frequently Asked Questions, cont.

#### What will the Policy Evaluation Program tell me about my existing policies?

The final report will provide you with the guidance needed to see if your policies are on track to reach their goals. If they are on track, then no further steps will be needed. If however, they are not on track to reach their goals, an analysis will be made to show options. Typically, these will include raising or lowering premium levels or altering the goals in the policy. This can be accomplished usually by raising or lowering the death benefit.

#### What will I have to do to take part in the Program?

Your insurance professional will be asked to fill out a Policy Evaluation Program Fact Finder. An in-force ledger for the policy will be required if available. You may be asked to sign a document allowing your insurance professional to gather information about your policie(s) from the life insurance carrier(s) issuing the policie(s). And if warranted, you may be

asked to fill out information on your present health situation.

#### Are carrier ratings important?

If you are making the decision to replace an existing policy with a new policy based on a sales illustration that relies on "guaranteed assumptions," understand that the policy guarantees will be only as strong as the carrier backing them. Review the ratings of the selected carrier against this listing of top ratings. A company's ratings should be monitored for change.

In addition to the ratings, it is wise to select a carrier that has a favorable Comdex rating. The Comdex rating is the average percentile ranking for all of the ratings received by a company. As such, it is not another rating, but rather an objective scale that can be used to easily compare the ratings of different companies.

| Rank | AM Best                     | Fitch Ratings              | Standard & Poors       | Moody's               |
